

Homebrew IC-OPC-1529R
Data Comm Cable
IC-2820H, 91AD, 2200H, ID-880H
& other model of Icom Radios

Even though it works,
you assume all risk in using this!!

1. 1 each db9 female serial connector & hood
2. 1 each 3/32 (2.5mm) stereo plug (Note: This is the Micro Miniature, VERY small one)
3. 3 feet (should be shielded) 3 conductor wire
4. Not required, but recommended is 1 Radio Shack or equivalent part No. 273-0069 Snap Choke Core to keep down RFI. 2 for \$3.88 or so.

Use Ohm Meter!! Be sure pins are correct and not shorted as USB/Serial port damage can result.

I made and tested 2 of these and they work as good as the ICOM OPC-1529R

Commercial version with shipping will cost you \$30-35.00)
You can build this one in 20-30 minutes for \$10.00 or less
